

**Honors Anatomy & Physiology – Summer Reading List (2016-2017)**  
**Mr. Jeff Sinks**  
**Jeff.sinks@sumnerschools.org**

**Your Inner Fish** – Neil Shubin

**Phantoms in the Brain** – V. S. Ramachandran & Sandra Blakeslee

This summer's reading list will include two books (see above). The school does not provide these texts. They are available at most bookstores or they can be purchased (new or used) online. Your Inner Fish examines human embryology and its' revelations of our relatedness to all living species. Ramachandran's book, Phantoms In The Brain, describes the brain and various aspects of its function. Both are written for an adult audience and involve content & situations that you will encounter in college level anatomy courses. During the 1<sup>st</sup> week of school in August, you should be prepared to take a summer reading test to demonstrate your familiarity of these books. Also, you **must** maintain a very neat (typed, #12 font, 1.5 spacing is preferred) written summary of each chapter that includes supporting information (a single paragraph will do). Also include a vocabulary list of the terms that were unfamiliar to you, for each chapter, and their definitions. Your chapter summaries will be collected on the 1<sup>st</sup> day of class.

**Get started early so you can pace your reading across the summer.**  
**You will enjoy it more & can then go back & review your notes in August before school begins.**
